# AN UPDATE FROM AQUASURE

---

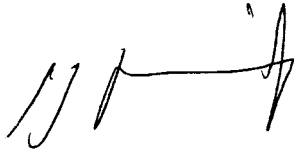

Dear all

Last week we updated you on our plans to install temporary power to supply the desalination plant as a contingency measure, in the event that repairs to equipment that links the underground cable to the desalination plant took longer than planned.

I am pleased to confirm that repairs to the equipment have been completed, and permanent power supply was restored to the plant on Friday 3 March. As a result, the temporary power supply will not need to be used.

Water production shall now commence and will continue until the end of June 2017 to meet the 2016/7 water order.

We will provide a further update once water is flowing.
